

BEACH ADVISORY

Supporting efforts to clean our shores

Release Date: **July 19, 2017**

Contact: AS-EPA Water Program at (684) 633-2304

The American Samoa Environmental Protection Agency (AS-EPA) advises the public that on **July 18, 2017**, the following recreational beaches tested positive for Enterococci bacteria levels that exceed American Samoa Water Quality Standards:

Utulei Beach
Aava Beach
Nuuuli Pala Spring
Nuuuli Pala Lagoon

AS-EPA beach advisories inform the public about current water conditions. When a beach advisory is issued, it is because water samples indicate that the American Samoa Water Quality Standard for Enterococci has been exceeded. This advisory is in effect until further sampling and laboratory analyses indicate that Enterococci concentrations are within acceptable water quality standards.

The presence of Enterococci in the water indicates contamination by human and/or animal wastes. Swimming in water with high levels of Enterococci may cause stomach problems, skin rashes, and ear, eye, and wound infections. To reduce your risk: avoid swallowing beach water, be sure to rinse or towel off after a swim, and shower once at home. If you are ill, or think you may be ill, AS-EPA advises that you consult a physician before making any water contact in the beaches cited above.

Note: AS-EPA monitors the water quality of 44 recreational beaches on Tutuila, the wharf in Aunu'u, and five beaches on Manu'a. Tutuila advisories are issued weekly on Wednesdays. Aunu'u and Manu'a advisories are issued monthly. Advisories are issued when bacteria concentrations exceed levels determined safe for human exposure. Should you have any questions, please contact the AS-EPA Water Program at 633-2304.

Thank you,
